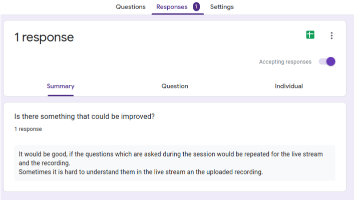
Organisation

Organisation I

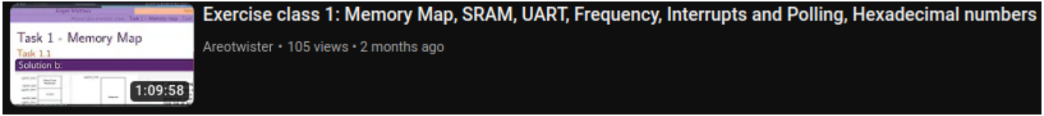
- feedback for lecture until February 29
- feedback for me: `https://forms.gle/f3YN8EFrZ1vsfPoC6`



- feedback from students in the last exercise class: don't overexplain tasks at the beginning so there's enough time for the tasks at the end

Organisation I

- the exercise class videos on youtube do now have a title containing the topics covered in the exercises of the corresponding exercise class

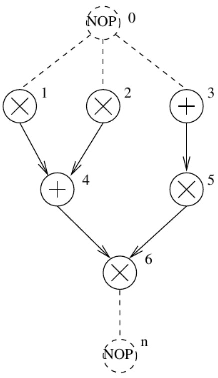


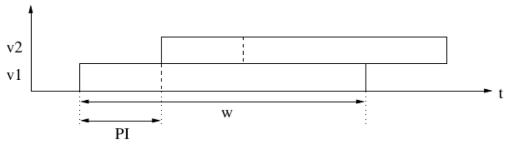
Task 1

Task 1 I

Scheduling with Pipeline Resources

Task 1.1:





Task 1

Scheduling with Pipeline Resources

Solution 1.1:

LIST($G_S(V_S, E_S)$,$G_R(V_R, E_R)$,α,β,$priorities$){
  $t = 1$;
  REPEAT {
    FORALL $v_k \in V_T$ {
      Determine candidates $U_{t,k}$ *to be scheduled;*
      Determine set of occupied resources $O_{t,k}$*;*
      Choose subset $S_t \subseteq U_{t,k}$ *with maximal priority*
        and $|S_{t,k}| + |O_{t,k}| \leq \alpha(v_k)$*;*
      $\tau(v_i) = t \;\; \forall v_i \in S_k$; }
    $t = t + 1$;
  } UNTIL (v_n planned)
  RETURN (τ); }

Task 1

Scheduling with Pipeline Resources

Solution 1.1:

- *$O_{t,k}$ is the set of resources of type k that are occupied in the time slot t and are not yet available for the following operation. On each of these resources exactly one operation is executed in a pipeline-interval.*
- $O_{t,k} = \{v_s : \beta(v_s) = v_t \wedge \tau(v_s) < t < \tau(v_s) + PI\}$ *instead of* $T_{t,k} = \{v_s : \beta(v_s) = v_t \wedge \tau(v_s) < t < \tau(v_s) + w(v_s, v_t)\}$

Task 1

Scheduling with Pipeline Resources
